

## China RoHS

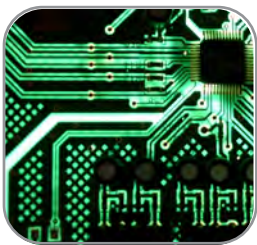

### The Challenge

China RoHS (China's Administration Measure on the Control of Pollution Caused by Electronic Information Products) took effect in March 2007 and limits the exact same 6 substances found in the EU RoHS Directive ie. lead, cadmium, mercury, hexavalent chromium, polybrominated biphenyls (PBBs), and polybrominated diphenyl ethers (PBDs) above the legal threshold. However, China RoHS will affect a business' entire supply chain due to the fact that China may require your products to be tested in a certified CCC lab.

### Your Solution to Simplicity

#### Intertek's Solution Packages for China RoHS Compliance

- **Product Assessment** - to determine if the product is within the legislative scope of China RoHS and develop a product labeling assessment report including:
  - Reference
  - Product Identification
  - Classification
- **Product Testing** - chemical and/or XRF testing of the product and/or component to ensure that the 6 restricted substances limits are met.
- **Marking, Labels, and Tables** - to create China RoHS labels, markings, and tables if a product contains a restricted substance in the appropriate Chinese language with set graphical standards in addition to:
  - Developing a unique hazardous substances table for each product
  - Consulting on requirements for markings
  - Developing package labeling / labels
- **3C Certification** - in the event that your product is added to The Catalogue, certification is mandatory. Utilize Intertek test reports to obtain 3C certification (when appropriate).

### In Summary

Intertek offers the complete solution for restricted substance compliance, providing sound traceability systems and strict enforcement of due diligence policies. Intertek does more than simply help our clients comply; we give them the competitive advantage.
