

Intertek ETL Entela offers product certification and testing services to automotive manufacturers and suppliers who want assurance that their product has been tested and conforms to industry-accepted quality standards.

As the demand for high quality automotive products continues to grow, you may find that the additional quality surveillance in the form of product testing and certification is exactly what your product requires.

Intertek ETL Entela has been accredited by the **A2LA** (American Association for Laboratory Accreditation) to ISO/IEC 17025, which outlines the general requirements for the competence of testing labs, and by the **SCC** (Standards Council of Canada) to ISO/IEC Guide 65, an internationally accepted guide which outlines the general requirements for bodies operating product certifications systems. Intertek ETL Entela is fully qualified to independently certify your product to determine that it has met specific quality standards, and will perform follow-up inspections to verify on-going compliance.

Intertek ETL Entela is recognized around the world as a leader in automotive testing, engineering, inspection, and systems certification. Product certification is yet another service we are pleased to offer to our customers.

Commonly Asked Questions about Intertek ETL Entela Automotive Product Evaluation and Certification
